ladylift

Because femininity is timeless.

A new and innovative technique combines the action of the infrared laser and the Ladylift™ handpiece in order to accelerate the production and the remodeling of mucosa's collagen.

LASER TREATMENT LADYLIFT™

Improvement up to 70% from the first treatment*

Age and muscular stress often cause an atrophic process within the vagina. If not adequately treated, this likely results in dryness, sexual difficulties, itching, burning, tissue laxity and urinary incontinence.

The main cause of this is the loss of tone of the vaginal mucosa.

The Ladylift™ treatment targets the vaginal mucosa. The wavelength (1470nm), combined with the controlled, radial emission of the Ladylift handpiece, has a bio-modulating effect that stimulates neocollagenesis and regenerates the epithelium and the connective tissue. This action rejuvenates the mucosa by restoring firmness, flexibility and hydration; therefore, considerably reducing symptoms that are usually attributed to menopause. Ladylift also has a positive effect on urinary incontinence, in many cases restoring the normal functionality.

The main advantage of using a diode laser is that the laser can penetrate deeper, targeting the mucosa, without causing an ablative thermal injury.

The handpiece's design and circular emission are unique to the **LADYLIFT™**. They allow for a painless treatment. The combination also ensures that the laser evenly targets all tissue on the inner walls of the vagina.

Suggested settings are present within the software for ease-of-use, but the physician can manually alter the settings. Additional handpieces are available for internal and external vulvar treatments, as well as aesthetic microsurgery.

APPLICATIONS:

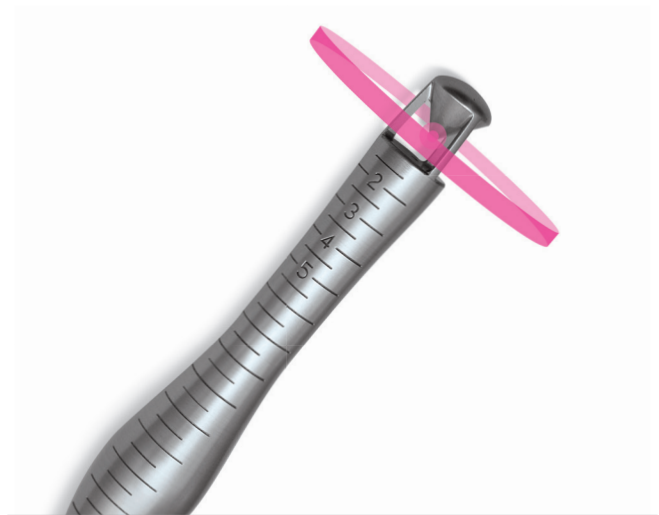

- Vaginal atrophy
- Urinary incontinence
- Vaginal laxity
- Diseases associated to postpartum alteration
- Vaginal rejuvenation**
- HPV
- Cysts
- Treatment of scars
- Dryness
- Itching

ADVANTAGES:

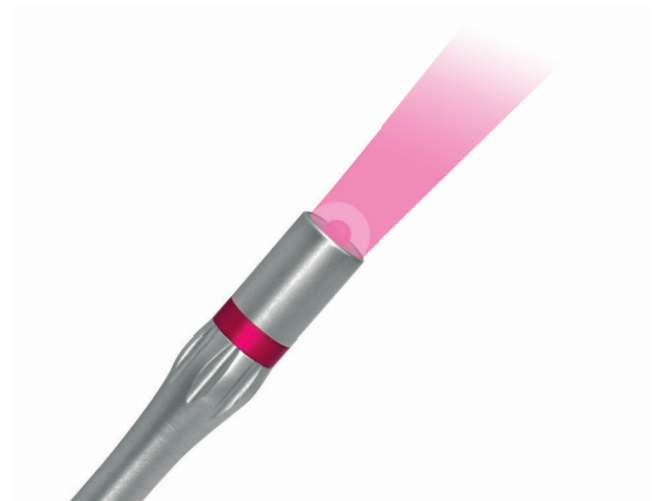

- Fully outpatient process without anesthesia
- No side effects
- Effective and painless
- Non-invasive

*Information based on subjective experience.

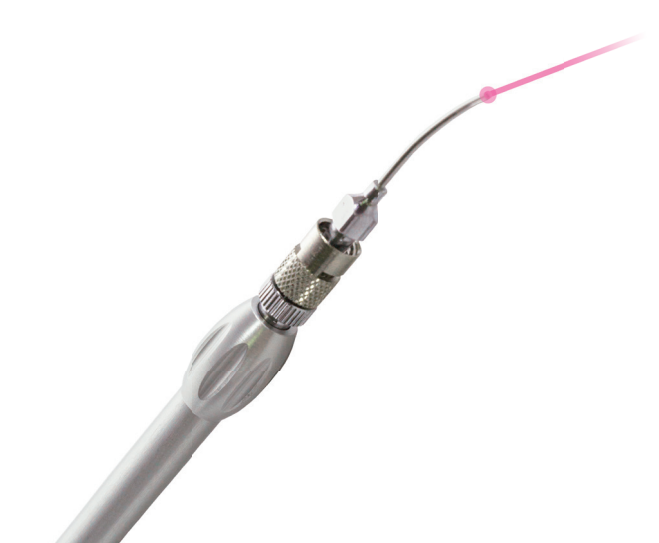

**Treatments that, not being associated to diseases, are not in compliance with CE0476.
